

A Rolling On Interroll success story from Warehouse Storage Solutions Limited

CONTINUING A LEGACY OF EXTRAORDINARY FLAVOUR

> THE CHALLENGE

Flavour is everything at Yorkshire, United Kingdom-based tea and coffee purveyor Taylors of Harrogate. Billed as “the home of extraordinary flavour,” the independent, family-owned business needed an extraordinary solution to speed up transport of its products, optimize space utilization and enable superb stock rotation. Taylors of Harrogate turned to Warehouse Storage Solutions Limited, a leading supplier to the UK storage industry.

> THE SOLUTION

As one of the UK's biggest and most highly respected providers of racking and storage solutions, Harrogate-headquartered Warehouse Storage Solutions, is a trusted supplier to many of the world's leading organisations. With more than 50 years of experience, the company's expertise makes it uniquely qualified to recommend, design and install customer-centric systems. Taylors of Harrogate's existing system lacked the stability essential to storing large sacks of raw tea and coffee: Loads weighing 1,000 to 1,200 kg leaned and bulged, and the existing timber pallets lacked the desired robustness. Moreover, the business needed an additional separator between lanes to meet its insurer's sprinkler system-related requirements. Warehouse Storage Solutions evaluated the situation before recommending and installing an Interroll's Pallet Live system based on the first in, first out (FIFO) principle. As a result, Taylors of Harrogate can benefit from significant space saving, since FIFO systems use 60 to 70 percent less space than conventional storage systems. Moreover, the system is low maintenance, consumes no energy, and boasts a long service life.

> IN A NUTSHELL

With a 130-year legacy of providing customers with extraordinarily flavourful teas and coffees, Taylors of Harrogates today enjoys great stock rotation, fast transport of its products from the rack to the blending room, and optimal space utilization, thanks to the expert support from Warehouse Storage Solutions. The racking and storage solutions experts from Warehouse Storage Solutions recommended and installed Interroll's renowned FIFO-based Pallet Live system at Taylors of Harrogates, establishing a proven foundation on which the tea and coffee purveyor can continue to build its tradition of delivering extraordinary flavour.

COMPANY DETAILS

Warehouse Storage Solutions Limited

is a leading supplier to the UK storage industry. Many years of industry experience allow the company to offer a full diagnostics of current storage situations, identify issues, and design and install solutions to remedy those solutions. Warehouse Storage Solutions works closely with customers to ensure that they receive the correct design on time—and exceeding expectations every time—and uses the most up-to-date computer-aided design (CAD) technology to ensure exact drawings and designs to Storage Equipment Manufacturers Association (SEMA) standard. Warehouse Storage Solutions helps customers exploit their full storage capacity with solutions designed to meet their specific needs.

Warehouse Storage Solutions Limited

is an official partner of the Rolling On Interroll program of the worldwide Interroll Group.

> **Why did Warehouse Storage Solutions choose Interroll?**

The proven quality of Interroll material handling solutions and Interroll's reputation as a trusted partner played a key role in Warehouse Storage Solutions' choice of Interroll as the equipment supplier for the Taylors of Harrogate project. The customer experienced the Interroll difference—namely successful pallet and load testing—during a visit to the Interroll test centre in La Roche-sur-Yon, France. An impressive five-year warranty on Interroll magnetic speed controllers and time plus separators was another important factor in Warehouse Storage Solutions' choice of Interroll.
